

Verti[®] by Anocoil

A thermally imageable CTP plate that develops either ON-PRESS or AQUEOUSLY in conventional processors.

Features & Benefits

- Negative Thermal Technology
- No Pre-Heat Required
- Low Imaging Power - only 100-150 mj/cm²
- High resolution reproduction - in excess of 200 Line Screen @ 2400 DPI
- 100,000 + impressions
- On press development or aqueous processing in conventional processors.
- Non-image area coating removed in solidus on-press via the paper train, or by aqueous processing.
- No contamination of press ink or fountain solution when on-press developed.
- No organic solvents or alkalies during processing.
